TRY1SECOND · GROWTH REPORT

SEO, Google Ranking & Affiliate Payout Report

What Google actually shows today, why the site sits at position ~50, which affiliate partners pay nothing right now, and the exact route to join each one.

Prepared 10 November 2026, 20:30 IST · Search data: Google Search Console, 28 days ending 9 November 2026 · Affiliate data: code audit of commit `89c28d8` plus LinkInR campaign sheet (166 approved campaigns) and Cuelinks account reads from 10 November

1. Summary, in five lines

- **Indexation is not the problem.** Google returns "Submitted and indexed" for the pages checked by URL Inspection (/, /answers, /best/flights, /cabs/noida, /hotels/mumbai, /movies/noida). 194 of ~1,020 sitemap URLs showed at least one impression in 28 days.
- **Ranking is the problem.** Average position 50.2, median query position 55.4, 2,447 impressions, 20 clicks, CTR 0.82%. At position 50 a sub-1% CTR is arithmetic, not a title failure.
- **Demand is already arriving in the money verticals.** Loans drew 1,125 impressions and insurance 324 with zero clicks, because those pages rank far outside the visible results.
- **Affiliate routing is broad, but routing is not the same as being paid.** 133 merchant domains are reachable; 84 have a network route, and only the ones with a joined campaign actually pay. 49 domains have no route at all.
- **One decision is waiting on you:** today every finance exit goes to your GroMo advisor link, including issuers where LinkInR already pays a known amount (SBI Card ₹1,900, Axis up to ₹1,600, IndusInd ₹1,280). GroMo's own rate per approval is not visible in our click data, so this report lists both and gives the one-line switch.

2. Google ranking: the measured position

CLICKS	IMPRESSIONS	CTR	AVG POSITION
20	**2,447**	**0.82%**	**50.2**
28 days	+44% vs 1,701	normal at pos 50	median 55.4

Where the impressions come from, and what they earn

Section	Impressions	Clicks	Reading
loans	1,125	0	Biggest demand, zero clicks. Ranked too deep to be seen.
insurance	324	0	Same pattern. These two verticals are the CPA opportunity.
product pages	199	0	Long tail, no commercial intent captured yet.
movies	192	6	Best click-through of any vertical.
cabs	128	2	Strongest query is "cab compare", position 8.6, 34 impressions.
bus	97	0	Route pages exist, ranking is weak.
food	97	0	Monetisation is zero here anyway (see Section 4).
guides	74	0	New pages, still being evaluated.
hotels	70	0	Competitive head terms, city pages are the better entry.
banking, ecommerce, grocery, credit-cards	159	0	Flat, needs internal links more than new pages.
homepage	27	10	50% of all clicks come from 27 impressions: brand only.

Pages already ranking well enough to build on

Page	Best position	Clicks	Use it as
/	2.2	7	Brand entry. Link out from here in body copy, not only the footer.
/about	1.5	0	Trust page. Add links to the money verticals.
/cabs/chandigarh	5.7	0	Proof that city pages can rank when the query is long tail.
/ecommerce/laptops	5.8	0	Repeat this shape for mobiles and appliances.
/grocery/jodhpur	6.5	0	City + category works. (No payout on grocery yet, see Section 4.)
/cabs/noida	6.8	0	Clone the pattern: NCR satellite cities.
/movies/noida	15.8	0	20 impressions, near page one. Push with city internal links.
/movies	21.5	0	57 impressions, the single biggest non-finance cluster.
/bus/chennai-to-madurai-bus	40.9	0	59 impressions for one route: the route-page model is proven.

The honest framing. Position 50 with 2,447 impressions means Google has decided the pages are relevant but not yet the best answer. CTR fixes (titles, schema) cannot move a page from 50 into the top 10. Only three levers can: query-phrase internal anchors, more real data per page, and third-party signals (backlinks, Play Store listing, Google Business Profile). None of those are claimed as done in this report.

3. Why the homepage gets the traffic, and the four fixes

27 homepage impressions produced 10 of the 20 clicks. The vertical and answer pages are indexed but receive no click pull, which usually means they are linked from navigation chrome (footer, menu) rather than from body copy that uses the query language people type.

Fix	What to change	Where
1. Anchor text = the query	Replace "compare" links with the phrase: "Delhi se Jaipur cab fare compare", "compare flight prices India all websites"	Homepage body, vertical hubs, guides
2. City links in the body	Each vertical hub: 5 city pages plus 2 state answer pages linked inside the content, not the footer	`server/seo/data.ts` link blocks
3. Answer hub cross-links	Every `/best/<vertical>` page links the vertical hub and 3 city pages back	`server/seo/answerPages.ts`
4. Freshness that is true	`dateModified` only moves when prices actually changed, never as a blanket stamp	snapshot render path

Then re-check GSC Coverage for `/best/*`. If those URLs show "Discovered, currently not indexed", the answer is more internal links from ranking pages, not another sitemap resubmission. A resubmission of a page that already 404s just records a soft 404.

4. Affiliate payout: what pays, what does not, and why

Audit run 10 November 2026 20:34 IST over the real source tree: 133 merchant domains the engine can produce an exit for. 84 have a network route today, 49 have none. A route is a necessary condition, not a payment: the advertiser's campaign must be joined and approved on that network.

MERCHANT DOMAINS
133
in the engine

ROUTED
84
have a network

NO ROUTE
49
partnership targets

APPROVED LINKINR
166
campaigns on the sheet

Network	Domains routed	Status on this account
Cuelinks	51	Publisher 278473, cid 326794. Approved: MakeMyTrip, Goibibo, Cleartrip, Shopsy, Nykaa, Croma, Lenovo, Oppo, Realme, Kotak811, KreditBee, Zurich Kotak. Others are wrapped as pending so the day approval lands, the click already pays.
LinkInR	10	Approved and paying, including strong finance CPA/CPL (Section 4.2). Deep destination URLs are dropped by this network.
GroMo	19	Your advisor link, universal for credit cards, accounts, insurance and loans since today's change. Pays per approved application inside GroMo; not visible in our click data.
vCommission	2	54 campaigns joined, all D2C brands. Only Ajio and TataCliq overlap our verticals.
Amazon Associates	1	Tag `try1second-21`, active.
CJ	1	Booking.com only (Cuelinks rejected that advertiser).
Admitad	0 in verticals	Connected campaigns are Onboarding plus Kiwi.com flights.

4.1 Verified payouts we can quote today

Merchant	Network	Payout	Type
MakeMyTrip	Cuelinks	₹112.5	per sale
Goibibo	Cuelinks	₹210	per sale
Cleartrip	Cuelinks / LinkInR	₹67.5 / up to ₹288	per sale
Shopsy	Cuelinks / LinkInR	7.5% / 8.84%	commission
Myntra	LinkInR	up to 8%	commission
Ajio	LinkInR / vCommission	8.64%	commission
Flipkart	LinkInR	up to 5.76%	commission
Nykaa	Cuelinks	4.2%	commission
Uber	LinkInR	₹120	per ride (CPS)
EaseMyTrip app install	Cuelinks	₹172.5	per Android install

4.2 Finance payouts that are already approved on LinkInR

These are live campaigns with a stated payout, verified in the LinkInR sheet. They are also the domains your GroMo advisor link currently takes (see the decision box below).

Issuer / product	Payout	Type
SBI Card (Simply Click / Simply Save)	₹1,900	CPA
SBI Cashback Card	₹1,800	CPL
Yes Bank POP credit card	₹1,610	CPA
Axis Bank Credit Card	up to ₹1,600	CPA
IndusInd Bank Credit Card	₹1,280	CPL
Jupiter Edge CSB RuPay card	₹1,120	CPA
IDFC First Credit Card	up to ₹1,040	CPA

Bank of Baroda lifetime free card	₹1,000	CPL
Kotak811 Super Account	₹900	CPA
Federal Bank Credit Card	₹900	CPA
Scapia Cards	₹760	CPA
Stable Money app	₹680	CPL
Kotak811 (₹5k / ₹2k variant)	₹560 / ₹500	CPL
Equitas savings app	₹354	CPL
AU Bank Credit Card	₹340	CPL
DBS Digibank	₹270	CPL
UNI Card GoldX	₹250	CPA
HDFC Tata Neu card	₹140	CPA
Airtel Payments Bank	₹110	CPA
ICICI Lombard bike insurance	₹24	CPA
CreditMantri / Fibe / Rupee112	₹20 / ₹22 / ₹45	CPL

Decision needed, and it is a real trade-off. Since today every finance exit (credit cards, accounts, insurance, loans) goes to your GroMo advisor link, including the issuers above. GroMo pays on approved applications, but its rate per product is not visible in our click data, so we cannot compare it with the LinkInR numbers. If GroMo actually pays more, keep it and ignore this box. If you want the measured rates back for specific issuers, it is one environment variable, no deploy of new code:

```
GROMO_SKIP_DOMAINS=sbicard.com,indusind.com,idfcfirstbank.in,axisbank.com,bobcard.co.in,au.bank.in,federalbank.co.in,kotak811.com,jupiter.money,scap
```

Those domains then fall back to LinkInR at the rates in the table, and GroMo keeps everything else. Tell me the GroMo rate sheet and I will pick the winner per issuer instead.

4.3 Verified zero: no campaign on any network

Group	Merchants	Why it pays nothing
Quick commerce / grocery	Blinkit, Zepto, Instamart, BigBasket, DMart, Licious, Milkbasket, Dunzo, Country Delight	Searched on Cuelinks, LinkInR, vCommission and Admitad by domain and by brand name: no campaign. JioMart exists only as an app campaign at 0.95%.
Food delivery	Swiggy, Zomato, Domino's, Pizza Hut, EatSure, Ovenstory, Freshmenu, Faasos, Behrouz	No publisher campaign anywhere. Only noise-level per-click offers.
Finance aggregators	BankBazaar, PaisaBazaar, PolicyBazaar, Coverfox, InsuranceDekho, CardInsider, GetDitto	Not joinable through networks at all, they run direct publisher programs. They are also competitors, so the engine deliberately does not send them our exits.
Hotel and airline own sites	Marriott, Hilton, Hyatt, IHG, Accor, Oberoi, Lemon Tree, FabHotels, Air India Express, Alliance Air, FlyBig	Brand-direct programs (Impact, CJ, Awin) or none. Huge lead times, low priority while OTAs already pay.
Ride hailing second tier	Ola, inDrive, Savaari, Meru, QuickRide, BharatTaxi	No approved campaign found. Ola has no self-serve affiliate program.

5. How to join each one, in practice

Target	Route	Effort
Cuelinks advertisers already listed but pending	Publisher dashboard, My Campaigns, apply per advertiser. Approval is usually same week; no code change needed because the wrap is already in place.	Low
LinkInR finance campaigns	Campaign sheet, join each product. Note that LinkInR strips the destination path, so keep it for landing-page-tolerant banks and use Cuelinks where the deep page matters.	Low
PolicyBazaar / BankBazaar / Coverfox / InsuranceDekho / CardInsider	Direct publisher signup on each site's partner page (they do not list on networks). Expect a call and a minimum-volume commitment for insurance.	Medium
Swiggy / Zomato	Brand affiliate via their partner forms or via EarnKaro / INRDeals style resellers. Coupon and offer pages convert better than plain listings.	Medium
Blinkit / Zepto / Instamart	No public program. Two options: brand-side partnership email, or monetise the category with a coupon reseller until a direct deal exists.	High
Hotel chains	Impact or CJ brand programs, one application per chain. Only worth it after the hotel city pages rank.	High
GroMo	Already live as the universal finance exit. Ask your GroMo account manager for the per-product payout sheet so Section 4.2 can be resolved on numbers instead of assumption.	Low

6. The next 30 days, in order

1. **Week 1:** internal anchor rewrite on the homepage and the six hub pages (query phrases, city links in body copy). This is the only change that can move position without new content.
2. **Week 1:** decide the GroMo versus LinkInR question per issuer, then set `GROMO_SKIP_DOMAINS` for the losing side.
3. **Week 2:** apply to every pending Cuelinks advertiser and to the LinkInR finance campaigns not yet joined. Both are dashboard work, no release cycle.
4. **Week 2:** Play Store listing for the app, and a Google Business Profile. Both are third-party signals that no on-page work replaces.
5. **Week 3:** 3 to 5 real data blocks per money page (price range, provider count, last updated) generated from rows already fetched, so loans and insurance stop being thin.
6. **Week 4:** re-read GSC. Success criteria: loans and insurance clicks above zero, average position under 40, and at least 250 pages with impressions.

7. Deploy and verification checklist

- Deploy: `git fetch origin && git reset --hard origin/main && touch tmp/restart.txt`. Do not run `npm run build` on the host (it rebuilds without the Firebase variables and dirties the tracked bundle).
- Then `curl /api/version`: it must report the deployed commit `89c28d8` or newer, and `dist.healthy: true`.
- Check `/answers` and `/best/hotels/maharashtra` return 200 before touching Search Console. A resubmit while they 404 records soft 404s.

> **What is measured and what is inferred.** Measured: GSC clicks, impressions, CTR, position by query and page (28 days to 9 Nov); the 133-domain affiliate audit and every payout figure quoted above; LinkInR sheet contents; indexation verdicts from URL Inspection. Inferred: why individual pages rank where they do, and the effect of the internal-link changes. Not measurable here: GroMo's per-product payout, because it is settled inside the GroMo dashboard rather than in our click data. The Cuelinks reporting API key is also currently rejected by their server, so campaign approval status was read through the dashboard and the routing simulation in code.
